Discrete-event simulation in Julia: machine_shop (8 replications of 4000 minutes, seed 20260101)

Title: DiscreteEventSimulation | Model: machine_shop | Seed: 20260101 | Replications: 8 | Horizon: 4000 | Warmup: 400.0 | Generated: | Engine: DiscreteSim | Sections: 8

Experiments

Replications, a detected warmup, batch means for a single run, paired comparisons and a factorial design -- all with common random numbers.

How long the transient lasts

Welch's procedure on the wip series over 5 replications suggests discarding the first 0 time units (plateau 4.007 ± 0.088).

Warmup

One long run, honestly

Scenarios

Best by cycle_time_mean: **quality_up** (compared with baseline, common random numbers on every replication).
